2. To comparative study of trainee's personality of science, commerce and Arts educational field.
3. To comparative study of personality of trainees as per educational stream and area.

3. Hypotheses

- H₀₁:** There isn't any meaningful difference between the personality of trainees of rural and urban area.
- H₀₁:** There isn't any meaningful difference between the personality of trainees of science, commerce and arts as per education stream.
- H₀₁:** There isn't any meaningful difference between the personality of trainees of science and commerce education stream.
- H₀₁:** There isn't any meaningful difference between the personality of trainees of science and arts education stream.
- H₀₁:** There isn't any meaningful difference between the personality of trainees of commerce and arts education stream.
- H₀₁:** There isn't any meaningful difference between the trainees as per education stream and area.
- H₀₁:** There isn't any meaningful difference between the rustic and urban area trainees of arts education stream.
- H₀₁:** There isn't any meaningful difference between the rustic and urban area trainees of science education stream.
- H₀₁:** There isn't any meaningful difference between the rustic and urban area's trainees of commerce education stream

4. Importance of Research

Gare. p. has said about the teacher that "The effect was produce more of how teachers are than what was they say." Knowledge only is not the aim of Education. It is more important that how students get mastery over the subject and how use the knowledge. Teachers are the necessity of invention.

Education is continuous and lifelong process. During this process many personalities' persons are creating effect on education. In it heritage, atmosphere, area, habit, knot, idol, social aptitude, interest, thought, conduct, manner etc are affected factors. With this research any effect was put of following characteristic by education stream that can be known. Besides this area play a role or not that also can be known.

By future teacher's personality the base of the social citizen's personality can become. Researcher has believed that with take the results be fore the eye the study of teacher's personality will be more useful.

5. Delimitation of the study

In the taken research, study having a very big population. Research taken with take in mind the limitation of time, strength and money. Every research has some problems. Present research's delimitations are as under

1. Present study is delimited to the trainees of tow B.Ed. colleges of Navsari Taluka.
2. In this research there are including the boy & girl trainees of the year 2011-12 for the sample.
3. It is delimited to assure questionnaire method only.

6. Population and sample selection

In this research the two institute of Navsari the training college, on Naran lala institute of teacher education and other Sardar Patel College of modern education in the year 2011-12 all the trainees studying in this both colleges were selected as the sample of the study. In this sample there were 180 trainees are included. According to educational stream, 60 trainees of Arts, 60 trainees of commerce, 60 trainees of science were included in the sample at the end.

In this present research 32 B. Ed colleges which are connected with Veer Narmad South Gujarat university, Surat situated in south Gujarat the trainees studying there in the year 2011-12 are become the population of the research.

7. Construction of the tools for data collection

The tools which are used to make research successful and to collect the data are called 'research tools. There are many tools for research. But researcher has to choose the tool with take in my objectives and hypothesis of present research. Present research is study type for getting more data approved questionnaire was used. For present research the personal data register created by him self and assured tools eysenek personality questionnaire (EPQ) by Girdhar Prasad Thakur and Manju Takur for measuring the B. Ed trainee's personality was used.

In present questionnaire 107 questions were there. All response was given in to 'yes' or 'no'. Each questionnaire's: summation of scores will count as whole personality score.

8. Statistical analysis method

In present research with take in mind the objectives and hypothesis of this research the data about the personality of trainees were taken from them by the personality measurement test approved by Giridhar Prasad Takur & Manju Takur.

After chocking each test, they were distributed in education stream. The difference find by Y-test is meaningful for statistic analysis it was cheeked. Findings are prepared by calculation of gutted result.

9. Conclusions

1. There is a difference between the personality of trainees of village and urban areas.
2. There is a difference between the personality of trainees of science and commerce education stream.
3. There is a difference between the personality of trainees of science and arts education stream.
4. There is a difference between the personality of trainees of Arts and science education stream.
5. There is a difference between the personality of trainees of village and urban area of arts education stream.
6. There is a difference between the personality of trainees of village and urban areas of science education stream.
7. There is a difference between the personality of trainees of village and urban areas of commerce education stream.

10. Educational suggestions

1. Give place to the type of syllabus by which the future teacher's personality will be impressive.
2. Take care more about that there will be no effect of area on teachers.
3. The teacher will not be limited only for his own education stream but it is necessary that he take bondage with other education stream also.
4. Should try to include modernization in our work.
5. Should try that the Arts trainees of education stream would be as impressive as science and commerce students.
6. Should pay more attention to the clarity of Arts education stream logical and statistic data.
